PUT THE BLOCK DIAGRAM PICTURE ON THIS PAGE! (Create the picture using pencil or drawIO)

Calmify System Architecture

Use this third page to describe complex parts of your design.

Frontend (currently implemented)

LoginActivity (User, Admin, Therapist)

- LoginActivity generates a page with the following elements:
 - EditText: inputEmail
 - TextInputEditText: inputPassword
 - Spinner: spinner_role
 - AppCompactButton: btnLogin
 - LinearLayout: btnSignUp
- When clicking on btnLogin, values of inputEmail, inputPassword, and spinner_role are sent as POST request to the backend

HomeActivity (User, Admin, Therapist)

- HomeActivity generates a page with the following elements:
 - Button: btn_profile
- Currently, the home page is used just for holding the profile button

ProfileActivity (User, Admin, Therapist)

- ProfileActivity generates a page with the following elements:
 - Button: btn_delete_profile
 - Button: btnEditProfile
 - Button: btnWorryNotes
 - Button: btn_back_home
- The ProfileActivity page allows the user to delete their profile by sending a DELETE request, while btnEditProfile and btnWorryNotes open their respective pages. The btn_back_home returns the user to the HomeActivity page.

EditProfile (User, Admin, Therapist)

- EditProfile generates a page with the following elements:
 - EditText: editName
 - EditText: editEmail
 - EditText: editPassword
 - EditText: editConfirmPassword
 - Button: btnSave
- The EditProfile page contains fields for the user to input their Name, Email and Password. After these fields are filled out and the Button btnSave is clicked, the frontend sends a PUT request with this data to the backend server

WorryNotes (User)

- WorryNotes generates a page with the following elements:
 - FrameLayout: btnAddWorryNote
 - GridLayout: worriesContainer
- Has a worriesContainer component that holds different notes. Each note has fields, such as "id", "title", "content", "dueDate", and "label" that are retrieved from the backend through a GET request. The btnAddWorry adds a new note and all notes can be edited or deleted (through a DELETE request) by clicking on them

Backend (Currently Implemented)

LoginActivity (User, Admin, Therapist)

Handles authentication and registration.

- inputEmail, inputPassword, spinner_role, btnLogin → POST /login → returns LoginResponse { id, email, role }
Verifies credentials and role.
- btnSignUp → POST /signup → returns UserResponse { id, email }
Registers new user; creates counsellor profile if role = COUNSELLOR.

HomeActivity (All roles)

- **btn_profile** → Opens **ProfileActivity**

ProfileActivity (All roles)

- btn_delete_profile → DELETE /{id} → deletes profile
- btnEditProfile → Opens EditProfileActivity
- btnWorryNotes (User only) → Opens WorryNotesActivity
- btn_back_home → Returns to HomeActivity
- Assigned counsellor card (User) → GET
/api/assignments/user/{userId}/counsellor-card

EditProfileActivity (All roles)

- Fields: editName, editEmail, editPassword, editConfirmPassword
- btnSave:
 - Admin → PUT /api/admin/update/{id}
 - Therapist → PUT /api/counsellors/{id}/profile
Updates user info and therapist profile (displayName, specialization, bio, status).

WorryNotesActivity (User)

- **btnAddWorryNote** → POST /api/users/{userId}/notes → creates note
- **worriesContainer** → GET /api/users/{userId}/notes → lists notes
- **Edit note** → PUT /api/notes/{noteId} → updates note
- **Delete note** → DELETE /api/notes/{noteId} → deletes note

Counsellor Profile (Therapist/Admin)

- **View all counsellors:** GET /api/counsellors
- **View profile:** GET /api/counsellors/{userId}/profile
- **Update availability:** PUT /api/counsellors/{userId}/update/{counsellorstatus}
- **Update rating:** PUT /api/counsellors/{userId}/rating/{rating}
- **Update profile picture:** PUT
/api/counsellors/{userId}/profilePicture/{profilePictureURL}
- **Upsert full profile:** PUT /api/counsellors/{id}/profile

Admin Features

- **Update user info:** PUT /api/admin/update/{id}
- **Create counsellor:** POST /api/admin/counsellor

PUT THE TABLE RELATIONSHIPS DIAGRAM on this fourth page! (Create the picture using MySQLWorkbench)
